

BH paper, exterior panels $\beta = 0.6 \tanh[3(x - 2l/3)] + 0.6$ χ^- horizon: $j_h \approx 212.8$

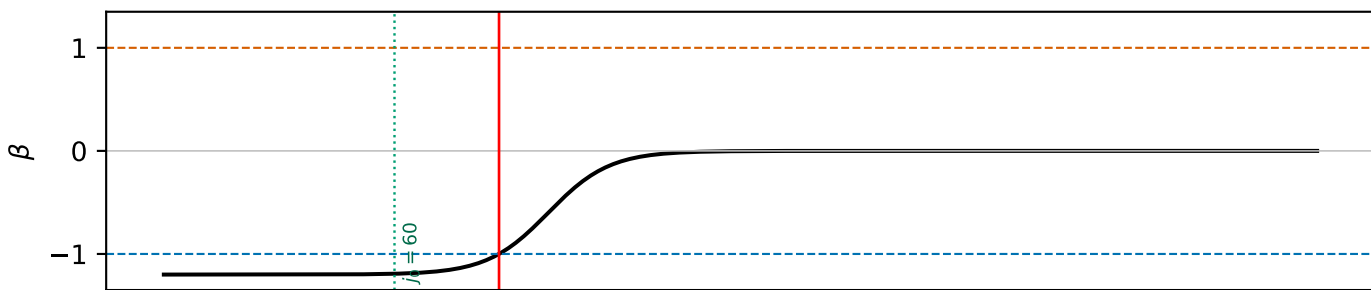

BH paper, interior panels $\beta = 0.6 \tanh[3(x - l/3)] + 0.6$ χ^- horizon: $j_h \approx 112.8$

WH paper panels $\beta = -0.6 \tanh[3(x - 7\pi/5)] - 0.6$ χ^+ horizon: $j_h \approx 222.8$

Legacy J_WH in common.py $\beta = 0.6 \tanh[3(x - l/3)] - 0.6$ legacy line: $j_h \approx 87.2$

surface_gravity_beta $\beta = \tanh(x - \pi) + 1$ code override $j_0 = 144$; paper says $j_0 = 245$
